SYNOPSIS: Dedicated software professional with hands-on experience in Python, Agentic AI, MCP, LangGraph, FastAPI, and Azure OpenAI, focused on developing AI agents, intelligent workflows, and scalable AI-driven applications.

EXPERIENCE SUMMARY

- Hands-on experience developing **AI agents** and workflows using **Python, Agentic AI, MCP, LangGraph, FastAPI, Azure OpenAI, and LLMs.**
- Worked on database-driven AI workflows, including **SQL**-based data retrieval, updates, validation, and integration with AI agents.
- Hands-on experience using **Replit** to develop complete UIs and integrate them with **backend APIs and AI agents** for end-to-end applications.
- Worked as a **Business Analyst** on the ServiceNow Underwriting Workbench, gathering requirements, collaborating with development teams, and creating user stories.
- Performed **manual and end-to-end testing** on ServiceNow Underwriter and Broker Workbench applications, including test script creation, defect logging, and retesting.

TOOLS & TECHNOLOGIES:

- Programming Languages & Frameworks: Python, SQL, FastAPI
- AI & ML: LLMs, Prompt Engineering
- Agent Frameworks: Model Context Protocol (MCP)
- Cloud Services: Microsoft Azure
- IDEs: VS Code, DBeaver
- Tools: Postman, Replit, Azure, Excel, Word, PPT

PROJECT EXPERIECNCE

1. Project Name: AI-Powered Underwriter Orchestration (Developer)

Duration: Oct 2025-May 2026

Project Description:

Agentic AI solution for automating Underwriter workflows using MCP tools and a LangGraph Orchestrator Agent, with a Replit-based UI integrated with the backend.

Roles & Responsibilities:

- Developed MCP tools for various Underwriter activities and integrated them with a LangGraph Orchestrator Agent.
- Built the frontend using Replit and integrated it with backend APIs and AI agents.
- Performed end-to-end testing and debugging of the application workflow.
- Tech Stack & Tools Used: Python, PostgreSQL, VS Code, Replit, Azure

2. Project Name: **AI-Powered Claims Orchestration (Developer)**

Duration: May 2026-Aug 2026

Project Description:

Developed an Agentic AI-based claims automation solution supporting four business personas, with a dedicated AI agent and set of MCP tools for each persona. Built the UI using Replit and integrated the frontend with backend agents and APIs for an end-to-end claims' automation solution.

Roles & Responsibilities:

- Developed four AI agents with persona-specific MCP tools for claims automation.
- Built the Replit-based UI and integrated it with backend APIs and AI agents.
- Tested and debugged agent workflows, MCP tool execution, API integration, and frontend-backend communication.
- Tech Stack & Tools Used: Python, PostgreSQL, VS Code, Replit, Azure

3. Project Name: Underwriter Workbench on ServiceNow (Business Analyst)

Duration: April 2025- May 2025

Roles & Responsibilities:

- Gathered and analysed Underwriter Workbench requirements through discussions with business and development teams.
- Collaborated with the development team to clarify requirements, workflows, and functional expectations.
- Created and documented user stories based on the identified business requirements and use cases.
- Tools Used: Excel, Azure DevOps

4. Project Name: Manual Testing of RepidX Underwriter Workbench (UWB) and Broker Workbench (BWB) (Manual Tester)

Duration: Nov 2024-Jan 2025

Roles & Responsibilities:

- Performed manual and end-to-end testing for RapidX UWB and BWB.
- Created and executed test scripts, logged defects, and performed bug retesting.
- Prepared testing documentation and collaborated with the team to ensure application quality and functional compliance.
- Tools Used: Excel, Azure DevOps

QUALIFICATION

B.Tech. in Computer Engineering | May 2024
Pimpri Chinchwad College of Engineering, Pune
